

Modeling Regulatory Impacts on Supply Chains

Motivation / Background

- ↑ Increasing regulatory requirements
- ↑ Growing manufacturing complexity
- ↑ More data

Initial Results

Regulation, lead-times, service level, and operational complexity are interrelated

Modeling impacts enables firms to strategically react

Key Question / Hypothesis

How do you assess the impact of changing regulations?

When do you react?

Methodology

Modeling with Machine Learning

Leveraging statistical algorithms to:

- Identify patterns humans can't see
- Find relationships between variables
- Model and predict unknown impacts

Expected Contribution

- Provide insights about the impacts of regulatory changes using data
- Analytical framework for modeling regulatory changes in the supply chain
